

INTER BOAT MARINAS

**This plastic modular pontoon system can be endlessly combined and is also easy to assemble yourself. Connect-A-Dock is suitable for swimming, rowing and canoeing. It also offers many options for floating pontoons and swimming platforms. System Connect-A-Dock is only suitable for sheltered locations.**

The Connect-A-Dock pontoon system includes two series:

### **1000 series**

With the 1000 series, pontoons and platforms can be assembled with a free-board height of 20 cm. This system is best suited for smaller waters or bays that are protected from waves. The 1000 series offers ideal options for platforms or pontoons for swimming, fishing or boating. The low profile also makes boats, kayaks and canoes easy to pull out of the water onto the jetty.

### **2000 serie**

With the 2000 series, pontoons and platforms can be assembled with a free-board height of 43 cm. This higher floating dock system is very suitable for mooring light boats such as sailboats and catamarans.

The 1000 and 2000 series offer elements of different sizes. The environmentally friendly polyethylene elements have a non-slip layer and are resistant to UV rays, salt water and very hot and cold temperatures.

### Connectors

For both series, elements can be connected using float connectors. In addition, the elements on the outside can be given a smooth finish using finishing blocks. This means that you can vary and compose endlessly according to your wishes.

### Freeboard

The 1000 series has a freeboard height of 20 cm. The 2000 series has a freeboard height of 43 cm.

### Buoyancy

The buoyancy of the elements of the 1000 series is 181 kg/m<sup>2</sup>, while the 2000 series is 382 kg/m<sup>2</sup>. The buoyancy can be increased locally by attaching additional 'buoyancy elements'.

### Accessories

System Connect-A-Dock has an extensive range of accessories such as a fixed swimming ladder, cleats, walkways and pole connectors.

### Anchoring

The Connect-A-Dock system offers various anchoring options, such as pole connectors or anchor blocks.

### Connect-A-Ports

Connect-A-Ports make it easy to dock your jet ski. The hull design of the Connect-A-Port has adjustable rollers, making it easy to store and sail.

Accessories are included in the range for attachment to the Connect-A-Dock 2000 series, fixed or floating jetties.

### Yakport Kayak launch

The YAKport provides safe and stable access to the water for kayaks and canoes. By placing it directly above the water level, you can easily get on and off the water and get out easily.

Accessories are available for attaching the YAKport to the Connect-A-Dock 1000, 2000 series and other floating or fixed jetties.
