

GRP grating mesh offers a very strong deck covering, which makes this covering ideally suited for intensive use. It offers a non-corrosive surface with ultra-low slip potential in both wet and dry conditions. GRP gratings are durable (UV-stabilized), have a long lifespan and can have a very large span due to fiberglass reinforcement. It is also fire resistant and needs virtually no maintenance.

GRP gratings

- Material: GRP - glass fiber reinforced polymer;
- Width: variable;
- Height: approx. 25 mm (multiple heights available on request);
- Weight: approx. 16 kg/m² (at a height of 25 mm);
- Colour: beige (multiple colours available on request);
- Distance of the supports: 400 mm to 650 mm.

GRP grids guarantee a rock-solid deck covering! The grilles are anti-slip, virtually maintenance-free and ultra strong.
